COT Contract No. 051033-01

Dear Mr. Barraza:

SCS Engineers (SCS) is pleased to submit this Asbestos Survey Report of the former Flint Oil property located at the 500 West Simpson Street in Tucson, Arizona. SCS appreciates the opportunity to assist you with this project. If you have any questions regarding this report, please feel free to contact either of the undersigned at (602) 840-2596.

Sincerely,

Stephen James  
Environmental Technician

Bradley F. Johnston, RG  
Vice President

1 INTRODUCTION

The City of Tucson Environmental Services (COTES) retained SCS Engineers (SCS) to perform an Asbestos Survey of the former Flint Oil property at 500 West Simpson Street in Tucson, Arizona. An Aerial Site Location Map is included as Figure 1 and a Sample Location Map is included as Figure 2 in Appendix A.

On April 17, 2008, Mr. Stephen and Mr. Brad Johnston of SCS surveyed the structures and concrete platforms for the presence of asbestos-containing materials (ACMs). Mr. James and Mr. Johnston are AHERA-Certified Building Inspectors (accreditation numbers 0272510316 and D10594, respectively). Copies of inspector certifications are provided in Appendix D.

2 METHODOLOGY

BUILDING CONSTRUCTION AND SUSPECT MATERIALS

The property consisted of a former office, vehicle shop, garage storage area, elevated concrete platform, and warehouse. The former office was not included in the survey.

The exterior walls and roofs of the warehouse and garage (vehicle shop) buildings were wood frame covered with sheet metal. The walls of the garage (storage) building were concrete. Flooring consisted of bare concrete.

SAMPLE COLLECTION

SAMPLING METHODOLOGY AND LABORATORY ANALYSIS

Asbestos

SCS collected a total of 18 bulk samples of the suspect asbestos-containing materials (ACMs) as listed in Table 1. Samples were collected by spraying the material with water, removing a small portion, and placing it into a plastic bag. Bags were labeled with a unique identification number and logged onto the chain of custody.

Bulk samples were delivered to EMC Laboratories for analysis by Polarized Light Microscopy (PLM). Samples containing multiple layers were individually analyzed by EMC. EMC is fully accredited by the National Voluntary Laboratory Accreditation Program (NVLAP; EMC NVLAP Lab Code: 101926-0) to perform analysis of bulk samples for asbestos using PLM.

3 ANALYTICAL RESULTS

PLM analysis of collected bulk samples did not detect asbestos at concentrations greater than one percent in the materials sampled.
4 CONCLUSIONS

An asbestos survey was performed by SCS for the shop buildings and concrete platform at the former Flint Oil property located at 100 West Simpson Tucson, Arizona. ACMs were not identified in the surveyed structures.

5 LIMITATIONS

This report has been specifically prepared for use and reliance by the COTES with application to a survey for ACMs for a former industrial site discussed in this report located at 100 West Simpson Street Tucson, Arizona. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, either expressed or implied, is made as to the opinions presented herein. Third parties use this report at their own risk. SCS assumes no responsibility for the accuracy of information obtained, compiled, or provided by others.

Hazardous materials present (e.g., trace metals, radon, hydrocarbons, etc.) or asbestiforms naturally occurring in soils and rock at this site were not considered in this survey. It is possible that additional ACMs may be present within wall spaces, attic areas, plenums, electrical panels, mechanical systems, etc. that were not accessible during this survey.

Additional information that was not available to the consultant at the time this survey was conducted or changes that may occur on the site may result in a modification to the conclusions and recommendations presented herein. This report is not a legal opinion.

**Analyst - Johann Hofer**

**Signatory - Lab Director - Kurt Kettler**

Distinctly stratified, easily separable layers of samples are analyzed as subsamples of the whole and are reported separately for each discernible layer. All analyses are derived from calibrated visual estimate and measured in weight percent unless otherwise noted. The report applies to the standards or procedures identified and to the sample(s) tested. The test results are not necessarily indicative or representative of the qualities of the lot from which the sample was taken or of apparently identical or similar products, nor do they represent an ongoing quality assurance program unless so noted. These reports are for the exclusive use of the addressed client and that they will not be reproduced wholly or in part for advertising or other purposes over our signature or in connection with our name without special written permission. The report shall not be reproduced except in full, without written approval by our laboratory. The samples not destroyed in testing are retained a maximum of thirty days. The laboratory measurement of uncertainty for the test method is approximately <1% by weight.

Accredited by the National Institute of Standards and Technology, Voluntary Laboratory Accreditation Program for selected test method for asbestos. The accreditation or any reports generated by this laboratory in no way constitutes or implies product certification, approval, or endorsement by the National Institute of Standards and Technology. The report must not be used by any entity to claim product endorsement by NVLAP or any agency of the U.S. Government. Polarized Light Microscopy may not be consistently reliable in detecting asbestos in floor coverings and similar non-frangible organically bound materials.
