CITY OPENS SANDBAG DISTRIBUTION SITE FOR FLOOD CONTROL PURPOSES

The City of Tucson has started a pilot program to assist residents with property protection from potential flooding due to monsoon storms. A sandbag distribution site has been established at Tucson Fire Department Station 7, 4902 E. Pima Street. The distribution location will open today at 3 p.m. Please see the attached map for more details.

The sandbag location will be self-serve and limited to 10 bags per person to accommodate as many residents as possible. The pre-filled sandbags will be stacked on the west side of Station 7 and the public should use Arcadia Avenue to access the distribution site. It is very important that motorists not block driveway access to the fire station. City staff will not be available to assist residents with loading. Members of the public are being asked to take only what they need to protect their property.
