RE: Historic Review for Roof Repair at 528 N.1st Ave.

The following is description of the repair work and materials to be used for the roof repair at 528 N. 1st Ave.

- The shed roof over the addition portion of the building is currently damaged beyond repair and the interior is now dangerously exposed to the elements
- The existing roofing materials are gone and to prevent the similar decay and problematic shedding of water and collection of debris, I propose to change the pitch direction of the roof to similarly match the gable elements on the other parts of the building.
- The primary relevant structure in the development zone for this project is the main house itself on this property.
- The existing walls and building layout will remain unchanged
- The repaired roof area will be covered with a matching 3 tab Shasta White asphalt shingle that is currently on the main house
- I am a licensed contractor and the work will be performed by my company MW Design and Construction, LLC
