DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The El Conquistador Water Tower consists of a 50,000 gallon-capacity water storage tank supported by steel girders, encased in a Spanish Colonial Revival style outer shell. The structure, which assumes the form of a truncated obelisk topped by an octagonal cupola, measures 30' square at the base and stands 90' tall. The exterior walls of the tower are constructed of sheet rock applied to a steel frame which is independent of the steel girders supporting the water tank, and are finished with tannish-brown colored stuccoed plaster.

Entry to the structure is by two large double doorways, one positioned at the center of the north facade at ground level, and one occupying a similar position on the south facade. Each set of double doors is framed by a rectangular surround embellished with Baroque ornamentation centered around a cartouche. The north and south facades each contain three rectangular, multi-paned windows spaced at regular intervals in a vertical alignment, while the east and west facades contain no openings. The top of the obelisk-shaped portion of the structure is marked by a parapet. Atop the obelisk is an octagonal cupola that features four semi-circular arched windows facing east, west, north and south. Each window rests on a balconet supported by scroll-shaped brackets, projecting from the parapet of the obelisk. Each window is framed by spiral columns topped by Corinthian capitals and elaborate finials, and embellished by ornate cartouches. Interspersed between the windows are four curvilinear-arched niches.

A terra-cotta tiled roof divided into eight segments covers the cupola, and rising from the apex of the roof is a 75-pound, four-foot-tall wrought iron weather vane depicting a prospector and his burro. The weather vane was removed by the City in 1978 after high winds weakened its bearings. A few months later, community outcry persuaded the City to replace the weather vane. The original weather vane, with a new mounting created from the front axle assembly of a 1955 Buick station wagon, is now back in place atop the "El Con."

The structure has remained substantially unaltered since 1932, and is in fairly good condition.

SPECIFIC DATES 1928

BUILDER/ARCHITECT Josias T. Joesler (architect)
John W. Murphey (builder)

STATEMENT OF SIGNIFICANCE

The El Conquistador Water Tower, constructed in 1928, is a rare example of the application of Spanish Colonial Revival architectural design elements to an essentially ordinary and utilitarian engineering structure. Built to serve the water supply needs of two early Tucson residential areas, the "El Con" nurtured the growth of the Colonia Solana and El Encanto subdivisions. Neighborhood residents today are returning the favor by fighting to preserve this local landmark, which provides a strong identity to the surrounding neighborhoods although it no longer supplies them with water.

Tucson's existence has always been dependent on groundwater to supply the needs of its residents and businesses; in fact, it is the largest city in the country entirely dependent on groundwater for its survival. As desert land gave way to city streets, new wells had to be drilled and water storage facilities built to accommodate the citizens' needs. The "El Con" was constructed in 1928 near the intersection of Broadway and Randolph Way to provide water for the new subdivisions of Colonia Solana and El Encanto, under development by John W. Murphey, and the now-demolished El Conquistador Hotel, a prominent early resort located to the north of Colonia Solana. Murphey was a well-known Tucson land developer, who was particularly important in the development of the area west of the University of Arizona.

In addition to its obvious function as a water tower, the "El Con" was intended as a promotional device to attract attention to the new subdivisions and to facilitate the sale of lots and homes in the area. Complaints from neighborhood residents that the water tower was an eyesore prompted Murphey to effect cosmetic improvements to the structure. As a result, prominent Tucson architect Josias T. Joesler was engaged to design an exterior shell for the structure to make it compatible with the character of the adjacent neighborhoods, which boasted many stately Spanish Colonial Revival and Mission Revival style homes. In 1932 the structure was encased with a Spanish Colonial Revival style outer shell, creating the appearance that the "El Con" essentially presents today.

Although the "El Con" has not functioned as a water storage facility since 1944, the City of Tucson Department of Water and Sewers continued to maintain the structure and uses it for equipment storage. Occasional threats to demolish the structure, prompted by rising maintenance costs, have been met with, and thwarted by, large-scale public opposition because the community considers the "El Con" to be an important local historic and architectural landmark worthy of preservation.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Tower is 30 feet square at the base and 65 feet tall. The east and west facades are unbroken, whereas the north and south facades are characterized by three small windows on the obelisk-like main portion of the structure. Atop this base is an octagonal cupola with arched windows flanked by ornate twisted columns. These windows face north, south, east and west. The cupola is topped with a Spanish tile. At the apex is a wrought iron weather vane, about four feet high, depicting in silhouette a prospector and his donkey. At the base of the Tower are two large doors, on the north and south sides. Above these are elaborate bas-relief scroll plaster ornamentations. The basic architectural style is Spanish Mission Revival

~~Josias T. Joesler (architect)~~

SPECIFIC DATES c 1929

BUILDER/ARCHITECT John W. Murnhey (builder)

STATEMENT OF SIGNIFICANCE

This ornate tower was designed and constructed to cover and camouflage a large water tank, built on this site to provide water to the new subdivision of Colonia Solana, under development at the time by John W. Murnhey. The water tank was also intended to serve the El Conquistador resort hotel complex across Broadway to the north of Colonia Solana. The tower was designed in the popular "Mission Revival" style of architecture, characteristic of many of the Joesler designed and Murphy built homes. From its inception, and up to the present time, the El Conquistador Tower has been a landmark. In addition to its functional purpose, it was intended to draw attention to the subdivision, promote the sales of lots and homes, and stand as a monument to its architect and builder. In all of these roles the tower has served admirably. It has become an "institution" not only to the neighborhood, but to the City Department of Water and Sewers which continues to maintain it though the water tank has not been in service for many years. The entire community considers the El Conquistador Tower an important historic structure, deserving of preservation, as witnessed by recent efforts by private citizens as well as City officials to repair the damaged weather vane.
