

Mission Manor Park Parking Lot - GSI concept

← stormwater runoff drawing is not to scale

**About the Project:**  
The City of Tucson Storm to Shade Program proposes to **remove approximately 1 acre of asphalt** in the oversized parking lot at Mission Manor Park and **add a green stormwater infrastructure greenspace** with native shade trees and vegetation to support wildlife habitat (pollinators,birds).

**Interpretive signage** in the parking lots can provide educational opportunities for park users and neighborhood residents to learn more about green stormwater infrastructure.

- Alignment with Prop 407: Splash Pad**
- opportunity to coordinate and leverage construction activities
  - Splash Pad is sited in drainage channel, parking lot GSI and asphalt removal will help to reduce stormwater runoff
  - opportunity to minimize parking lot space and reduce unsafe driving

Current conditions - West Parking Lot
