

Rainwater HARVESTING

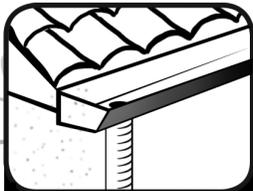

In the scene below, draw the different rainwater harvesting items where they might belong around the house.

Cistern

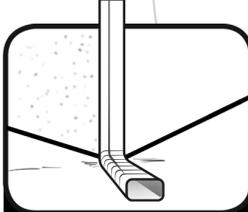

A large container to store collected rainwater.

Rain Gutter

Catches rain water from the roof and channels it to the downspout.

Downspout

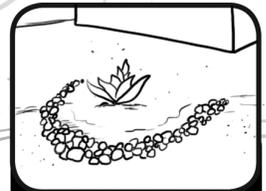

Channels rainwater from the rain gutters down from the roof into a cistern or out away from the house where it can be soaked up by plants.

Desert Plants

Desert plants need less water than thirsty lawns.

Landscape Basin

Captures rainwater and allows it to slowly infiltrate into the ground for later use by plants.
