* mg/L means milligrams per liter  
1 mg/L = 1 teaspoon in 1,302 gallons  
S.U. = Sample Units  
SP = Sample Points  
deg°F = Degrees Fahrenheit  
* Due to rounding, systemwide averages may vary.

### TOTAL COLIFORM & E. coli

EPA standards for Total Coliform and E. coli:
- Total Coliform positive samples/mo. – 247 samples
- E. coli positive samples/mo. – 247 samples

Follow-up assessment required?

### CHLORINE

- Actual Average: 0.9 mg/L
- 247 samples
- Tucson Water target average: 0.8 to 1.2 mg/L
- EPA Standard: Max. 4.0 mg/L
Corona de Tucson is a community located near Sahuarita and Houghton Roads, with about 2,600 connections supplying about 7,300 persons with water from three wells.

Catalina is a community partially served by Tucson Water. It has about 400 connections, supplying water to about 1,000 persons with water from two wells.

May 2018

Tucson Water also monitors water quality at 9 separate and distinct community systems served solely by local groundwater wells – not from the main water distribution system. Hundreds of individual tests are conducted each year on these community distribution systems to ensure well water is clean, safe and secure.
Rancho del Sol Lindo is a community located southwest of Silverbell Road and North Trico Road. Rancho del Sol Lindo has about 1,000 connections, supplying about 2,700 persons with water from two wells.

Diamond Bell is a community located south and east of Sasabe Road and Diamond Bell Ranch Road respectively, with about 200 connections supplying about 570 persons with water from two wells.
